Professional Summary

Machine Learning Engineer with 2 years of experience developing predictive models, time-series forecasting systems, and AI-driven decision-support applications across industrial and financial domains. Experienced in feature engineering, statistical modeling, and production AI systems, with expertise spanning both machine learning and generative AI. Currently pursuing the MITx MicroMasters in Statistics and Data Science, with a focus on building scalable analytical frameworks for complex real-world problems.

Experience

Software Engineer — AI & Machine Learning

May 2024 – Present *LTIMindtree, Kolkata*

- Developed predictive machine learning solutions for industrial decision support, building forecasting and failure-prediction models using statistical feature engineering, time-series analysis, and model evaluation techniques on operational and market datasets.
- Enabled natural-language access to enterprise data by developing a voice-enabled Text-to-SQL assistant that leveraged LLM reasoning, agentic workflows, and Snowflake integration to generate conversational responses from operational datasets.
- Engineered an LLM-powered reverse-engineering platform that transformed legacy COBOL applications into structured functional documentation, accelerating knowledge extraction and modernization efforts for a Tier-1 banking client.
- Contributed to enterprise modernization initiatives by developing GenAI-assisted migration workflows that converted spreadsheet-driven business applications into scalable web-based systems with maintainable backend logic.

Software Engineering Intern

Aug 2023 – Oct 2023 *LTIMindtree, Remote*

- Developed cloud-based machine learning prototypes using AWS services and gained hands-on experience in model deployment, data processing workflows, and enterprise AI application development.

Projects

PINAKA – Agentic Trading Assistant [Demo] | *Python, Feature Engineering, LangGraph, GraphRAG, KNN, LLMs*

- Developed a retail trading assistant by formalizing discretionary trading methodologies into structured market-state representations, enabling systematic analysis of market context, trade opportunities, and execution conditions.
- Designed a hybrid retrieval and reasoning framework that combines engineered market features, historical outcome retrieval, knowledge graphs, and LLM-based agents to assist traders with context-aware decision support using live market data.

Applied Predictive Modeling [GitHub] | *Python, Scikit-Learn, XGBoost, Time-Series Analysis, Feature Engineering*

- Developed reusable machine learning pipelines for predictive modeling and time-series forecasting, incorporating data preprocessing, feature engineering, model training, evaluation, and comparative analysis across multiple algorithms and datasets.

Technical Skills

Programming: Python, SQL

Machine Learning: Predictive Modeling, Time-Series Forecasting, Regression, Classification, Feature Engineering, Model Evaluation, Ensemble Methods

Statistics: Statistical Inference, Probability Theory, Hypothesis Testing, Time-Series Analysis, Stationarity Testing

Generative AI: Agentic AI, Multi-Agent Systems, RAG, GraphRAG, LLM Orchestration, Structured Outputs, Text-to-SQL

Frameworks & Libraries: Scikit-Learn, TensorFlow, Hugging Face, LangGraph, LangChain, NumPy, Pandas, SciPy

Cloud & Data Platforms: AWS (Bedrock, Lambda, SageMaker, S3), Snowflake, Docker, Git

Domains: Financial Markets, Oil & Gas, BFSI

Education

Massachusetts Institute of Technology (MITx)
(Methods Track)

Remote MicroMasters Program in Statistics and Data Science
Jan 2026 – Present

St. Thomas' College of Engineering and Technology
9.10/10)

Kolkata, India B.Tech in Information Technology (CGPA:
Aug 2019 – Jul 2023

Achievements & Certifications

Enterprise AI Recognition: Contributed to an AI-powered operational intelligence platform featured in the *Wall Street Journal*; received the **LTIM Energy Portfolio Innovators Award** for enterprise GenAI solution development.

Machine Learning: Selected for the **Amazon ML Summer School**, completing advanced training in deep learning, probabilistic graphical models, causal inference, and reinforcement learning.

Competitive Programming: Global Rank 19 in the CodeChef November Cook-Off (6,000+ participants); solved 1,000+ DSA problems across competitive programming platforms.

Certification: GitHub Copilot Certified.
