PROFESSIONAL SUMMARY

AI Systems Engineer with 2 years of experience building production-grade agentic AI, LLM, and machine learning solutions. Experienced in designing retrieval-augmented systems, multi-agent workflows, and enterprise AI applications across industrial and financial domains. Contributed to an AI-powered operational intelligence platform featured in the Wall Street Journal and recognized with the LTIM Energy Portfolio Innovators Award. Currently pursuing the MITx MicroMasters in Statistics and Data Science to deepen expertise in machine learning, statistical modeling, and AI systems.

EXPERIENCE

Software Engineer (GenAI & Machine Learning) <i>LTIMindtree</i>	May 2024 – Present <i>Kolkata, India</i>
- Enabled field engineers to access operational data through natural language by developing a voice-enabled Text-to-SQL assistant that leveraged agentic workflows, LLM reasoning, and Snowflake integration to generate conversational responses from enterprise data. - De-risked legacy modernization initiatives for a Tier-1 American bank by engineering an LLM-powered reverse-engineering platform that transformed complex COBOL applications into structured functional documentation. - Developed machine learning and time-series forecasting solutions for industrial decision support, including gross-margin prediction and equipment failure forecasting using operational and market data. - Contributed to enterprise modernization efforts by building GenAI-assisted migration workflows that transformed spreadsheet-driven business processes into scalable web-based applications with maintainable backend logic.	
Software Engineering Intern (IGNITE) <i>LTIMindtree</i>	Aug 2023 – Oct 2023 <i>Remote</i>
Completed LTIMindtree's IGNITE engineering program with focus on AI application development, machine learning workflows, and AWS-based cloud deployment.	

PROJECTS

PINAKA – Agentic Trading Intelligence Platform [Demo] | *LangGraph, GraphRAG, RAG, Reranking, LLMs*

- Formalized discretionary trading methodologies into a structured knowledge framework, enabling explainable AI-driven analysis of market structure, liquidity interaction, auction dynamics, and trade execution context.
- Developed a multi-agent GraphRAG platform that combines retrieval, graph-based knowledge representation, and LLM reasoning to generate doctrine-grounded market assessments and decision-support workflows.

Machine Learning Algorithms from Scratch | *Python, NumPy, Mathematical Optimization*

- Implemented foundational machine learning algorithms, including Gradient Descent and Linear Regression, from first principles using NumPy to strengthen understanding of optimization, matrix operations, and model training mechanics.

TECHNICAL SKILLS

Languages: Python, SQL
AI Systems: Agentic AI, LLM Orchestration, MCP, RAG, GraphRAG, Prompt Engineering, Structured Outputs, Text-to-SQL
Machine Learning: Predictive Modeling, Time-Series Forecasting, Feature Engineering, Model Evaluation
Cloud & Data Platforms: AWS (Bedrock, Agent Core, Lambda, S3, DynamoDB), Snowflake, Docker, Git, Palantir

EDUCATION

Massachusetts Institute of Technology (MITx) <i>MicroMasters Program in Statistics and Data Science (Methods Track)</i>	Remote Jan 2026 – Present
St. Thomas' College of Engineering and Technology <i>B.Tech in Information Technology (CGPA: 9.10/10)</i>	Kolkata, India Aug 2019 – May 2023

ACHIEVEMENTS & CERTIFICATIONS

- Enterprise AI Recognition:** Contributed to an AI-powered operational intelligence platform featured in the *Wall Street Journal*; received the **LTIM Energy Portfolio Innovators Award** for enterprise GenAI solution development.
- Machine Learning:** Selected for the **Amazon ML Summer School**, completing advanced training in deep learning, probabilistic graphical models, causal inference, and reinforcement learning.
- Competitive Programming:** Global Rank 19 in the CodeChef November Cook-Off (6,000+ participants); solved 1,000+ DSA problems across competitive programming platforms.
- Certification:** GitHub Copilot Certified.
